The CDF gives the probability of finding number $\leq$ or less than x in the given distribution.

Made with Xodo PDF Reader and Editor

The CDF is obtained by integrating from $-\infty$ to x:

$$f(x) = \int_{-\infty}^{x} p(x)\,dx = \int_{-\infty}^{1} p(x)\,dx + \int_{1}^{x} p(x)\,dx$$

$$= \begin{cases} 0 + \dfrac{(x^3-1)}{63} & (1 \le x \le 4) \\ 0 & (x \le 1) \\ 1 & (x > 4) \end{cases}$$
